

Comment #1 – 1/21/08 – 9:46 a.m.

In Section 3.2, Historical Insurance and Non-Insurance Data, I believe it would be appropriate to add something along the lines of: *In situations where non-insurance data is being, the actuary should determine and document the causal relationship between the non-insurance data being used and the event or value being forecasted.*

Thank you for the opportunity to review and provide comments.
